

Silicone Rubber case for BioMetric Tablet

Characteristics

Characteristics	Description / Function
Material	Provides high tensile strength, flexibility, and a non-slip grip.
Hardness	Offers a tactile, cushioned feel while retaining structural integrity.
Density / Specific Gravity	Lightweight but dense enough to protect against heavy drops.
Operating Temperature	Protects electronics in extreme cold or sweltering outdoor conditions.
Tensile Strength	Prevents tearing when stretching the case over the biometric device.
Elongation at Break	High elasticity ensures a snug, custom fit.

Functional Features & Benefits

- **Shock Absorption:** Engineered with reinforced corner bumpers to protect delicate internal scanner components and glass screens from drop impacts.
- **Tamper Prevention:** Custom molds restrict access to exposed ports, screws, or battery compartments.
- **Environmental Sealing:** Provides dust-proofing and water resistance, preventing moisture or debris from damaging biometric sensors.
- **Thermal Management:** Contains molded venting channels or heat-dissipating geometric designs to keep the processor cool during extended use.
